ReactJS Homepage Implementation

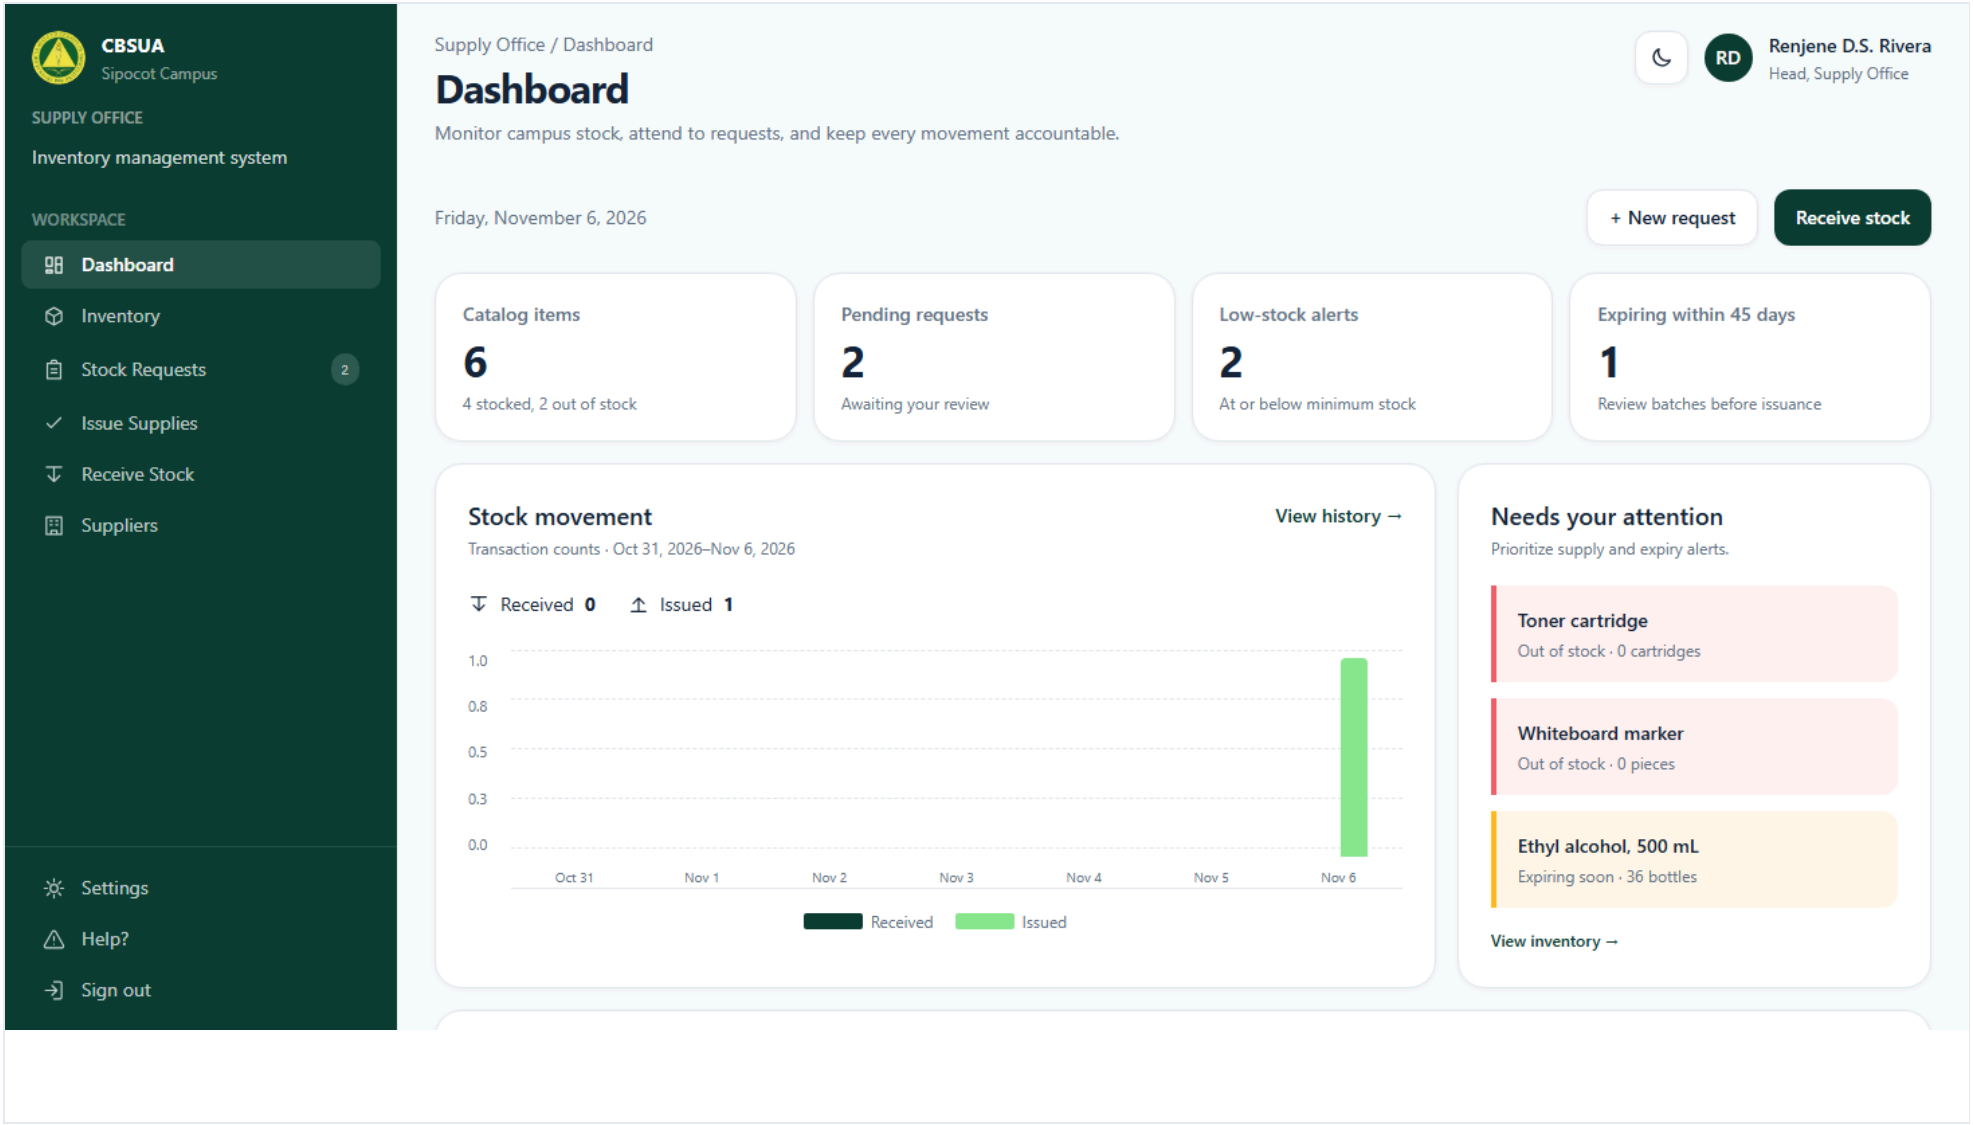

Reference homepage screenshot supplied with the activity. It guides the dashboard layout, navigation, inventory summaries, and stock alerts.

Reference dashboard provided for the implementation.

ReactJS implementation

The responsive React + TypeScript homepage opens to the dashboard. It uses Tailwind CSS and CBSUA branding; data is sample client-side content.

Updated homepage using the requested six-component structure.

IMPLEMENTATION NOTES

Components and interactive features

The homepage follows the requested src folder structure. Typed props pass data and handlers between reusable React components.

Navbar.tsx

CBSUA logo, responsive navigation, Dashboard-first heading, date, theme control, and request/receipt actions.

Hero.tsx

Homepage dashboard: summary cards, stock movement, supply alerts, and recent transactions.

StatCard.tsx

Reusable summary card accepting title, value, and supporting text as props.

SupplyList.tsx

Searchable, status-filtered supply catalog with reusable status labels.

LoginModal.tsx

Shared request, receipt, and request-review dialogs with approval actions.

Footer.tsx

Pending-request reminder and review action, plus the campus footer.

Working interactions

- Responsive sidebar toggle and light/dark theme switch.
- Catalog search and stock-status filters.
- Supply request submission, stock receipt updating inventory/history/chart, and request approval.

Built with React, TypeScript, Vite, and Tailwind CSS. All inventory/request data is demonstration data; no backend is connected.
